Proposal Template

First page may contain the title of your project, team members' name and IDs, your supervisor name and designation. You can add a cover page before this page also.

The proposal should contain the following headings with some description.

1. Project Overview

Project overview should contain a description of the project. You can add a background or scenario which actually triggers the idea of the project. This can be 1-3 paragraphs.

2. Problem Statement

Problem statement should contain the problems associated with the overview / scenario / background of the project. This section highlights the necessity of the project. It actually focuses on those problems which will be solved by building the software.

3. Core Features

Here, the solution of the problem will be discussed as features. This section contains the project functionalities, core or exciting features. These features as a whole will give some values to the user so that the problems will be solved.

4. Technologies

Technologies section contains the technical requirements of your project. Whether it will be a web, desktop or mobile application. Which language, database, library will be used. Additionally, you can add which code editor or IDE will be used to develop the software.

5. Timeline

This section contains a tentative timeline of your project. You can use days or weeks as a time unit. Divide the project into some parts / activities or core functionalities. Then, compute the time needed to complete each part of the project. Some parts may have an overlapping timeline. You can use the gantt chart.
